|	
Client	HealthEFirst, developed for HiSpirit LLC is a web enabled interactive solution used by end users of insurance groups. HealthEFirst or shortly HEF is an intelligent communication technology which offers wide variety of functions.
Business Challenge /Requirement	HEF, unlike any other health management products in the market today, continuously collects data while building a massive intelligence database and combining it with documented research, giving members the personalized information and direction they need without requiring them to go find it. When users are engaged with HEF, they will be able to manage their health through convenient digital communication with a "virtual coach" that will provide motivation and tools based on the feedback individuals offer on an ongoing basis.

Solution /Scope of Work	1. Website design
	   a. Templates
	
	2. Some interactive features include:
	   • Create a dynamic web portal for users of any insurance company within the contract can access all the functionalities as offered.
	   • Create data marts to accommodate data from the insurance companies
	   • Create a Single Sign On service to handle multiple logins
	   • Develop a dynamic and scalable web portal that can accommodate any future enhancements with role based security and data access
	   • Create Forms, Search functionality and result lists for the Business Functions
	   • Develop applicable Workflows for all business functions
	   • Creation of reports for Administrator role in .NET applicable controls
	   • Users can create groups and roles and associate users to those
	   • Create and Consume web services to handle all service requests
	   • Community with features to create forums, post on wall, interact with friends and etc
	   • Features as HRA, Performance Ratings
	   • Integration with SMS and other auto notification processes
	   • All Security is HIPPA compliant
